SUMMARY

Full Stack MERN Developer skilled in building REST APIs, MongoDB schemas, and responsive React frontends. Experienced with IoT-integrated systems. Seeking a Full Stack Intern role to contribute and grow.

EDUCATION

Guru Gobind Singh Indraprastha University (GGSIPU)

B.Tech in Information Technology | CGPA: 8.62

BMSBM Sr. Sec. School

Class XII | 90.20%

New Delhi, India

2022 – 2026

New Delhi, India

2021

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST API Design, JWT Authentication, Middleware, MVC Architecture

Database: MongoDB, Mongoose ODM, Schema Design, MySQL, Redis

Frontend: React.js, JavaScript, HTML5, CSS3, Tailwind CSS

State Management: React Hooks, Context API, Redux (familiar), Axios / Fetch

Tools: Git, GitHub, Vite, Postman, VS Code, NPM, Render, Vercel

PROJECTS

JobBoard – Full-Stack Job Application Platform | *MERN, Redis, Cloudinary*

June 2026

- Built a full-stack job board with role-based auth (applicant/recruiter), resume upload via Cloudinary, and recruiter/applicant dashboards for managing job postings and tracking application status.
- Implemented a Redis caching layer (cache-aside pattern) on job listing/detail endpoints with automatic invalidation on writes, plus tiered rate limiting (express-rate-limit) on auth and application routes to prevent abuse.
- Enforced data integrity with a compound unique index to block duplicate applications at the database level, and cascading deletes to prevent orphaned records; integrated Nodemailer for status-update email notifications. Live at job-board-three-drab.vercel.app.

Parklith – IoT-Based Smart Parking Management System | *MERN, React Native, ESP32*

May 2026

- Engineered an end-to-end IoT parking system — interfaced waterproof ultrasonic sensors with an ESP32 microcontroller to detect real-time slot occupancy and transmit data to a Node.js/Express backend via HTTP polling.
- Designed a MERN stack dashboard and a React Native mobile app (Expo) to display live parking slot availability — built RESTful APIs consumed by both clients with shared MongoDB collections for slot state and history.
- Led end-to-end development of the system, covering hardware integration, backend APIs, web dashboard, and React Native mobile app; deployed the backend on Render and the application on Expo Go. Live at parklith.vercel.app.

ShareBite – Food Sharing & Donation Platform | *MERN Stack*

November 2025

- Engineered a full-stack MERN application — designed RESTful API with 8+ Node.js/Express endpoints covering auth, listing CRUD, and donation lifecycle, all backed by MongoDB with Mongoose schemas and validation.
- Implemented JWT-based authentication with bcrypt password hashing, server-side protected route middleware, and persistent client-side session state — eliminating redundant re-authentication calls.
- Designed MongoDB schemas for users, food listings, and donation requests; optimized data retrieval using indexing and `populate()` for efficient relational queries. Live at sharebite-d393.onrender.com.

PROBLEM SOLVING

LeetCode

Solved 200+ DSA problems in Java — strong in arrays, strings, stacks, linked list
